What is this exercise about?

02

What are the requirements and where to find the materials?

03

Exercise overview and demo

01 What is this exercise about?

The Business Scenario

Retail transactions sample data from a number of outlet stores for beverages located in the United States. The transaction details include the store, the sold product, the sales manager, and measures on revenue, cost, discount, and profit.

The sales department is looking for a few analytics they need:

- Year over Year Sales Comparison (#8)
- Sales Per Region (#9)
- Top Sales Manager (optional #20)

The exercises will walk you through the steps using SAP Business Data Cloud with a strong focus on the analytical components with SAP Datasphere and SAP Analytics Cloud to answer those open questions.

The following tables are being used and the data is provided on GitHub:

Table Name	Description	Model Type
Sales Transactions	Daily retail transactions per store	Relational Dataset
Store	Details per Store Outlet	Dimension
Sales Manager	Details on all Sales Manager	Dimension
Product	Details on the products being sold	Dimension

The Data Model

02 What are the requirements and where to find the materials?

Requirements

- ❑ Google Chrome or Microsoft Edge Browser
- ❑ Access to the GitHub Repository for the script & files:
<https://github.com/SAP-samples/teched2025-DA264>
- ❑ Access to any SAP Datasphere and SAP Analytics Cloud system. In case you do not have access you can use a [basic trial](#) system
- ❑ You will also need a set of files for these exercises.
Download the ZIP-file from the GitHub site:
[→ DA264 Resources.zip](#)

Name	Date modified	Type	Size

DA264 - SAP Business Data Cloud: Explore the analytical components end to end

Description

This repository contains the material for the SAP TechEd 2025 session called DA264 - SAP Business Data Cloud: Explore the analytical components end to end.

Overview

This jump start session will give you the opportunity to build a scenario with exercises for SAP Datasphere and SAP Analytics Cloud.

Find out how SAP Datasphere helps line-of-business users get the job done. Discover flexible connection features, and learn how you can access data from different sources. Create an extendable business semantic model in an agile way, and connect analytics and visualization components in the context of a data warehouse.

Disclaimer

- Your screenshots may look different than those in the exercises, as new releases might include additional features or enhancements.
- Some user interface elements might differ from the screenshots used in the exercises.

Requirements

- Google Chrome Browser or Microsoft Edge based on the Chromium engine
- Access to this GitHub repository
- Access to any SAP Datasphere and SAP Analytics Cloud system. In case you do not have access you can use a basic trial. The optional exercise #23 is only working using a basic trial.
- You will also need a set of files for these exercises
Download the ZIP-file from the GitHub site: [DA264 Resources.zip](#) (button "download raw file")

03 Exercises and optional exercises

We structured the overall exercise the following way:

- Use the blue path to finish early and enjoy exploring the system on your own
- You can learn more and use the **Optional Exercises** for deep dives on different topics

03 The final state after all exercises

X Exercise no. X

Y Optional exercise no. Y

**Where ideas
get real.**
